

Duraba Plastic Chemical Industry Trade Inc. has world-class production facilities with the latest technological infrastructure established with 100% domestic capital. Duraba Plastic Chemical is an pressure-sensitive adhesive tape manufacturer. Our factory is located in Izmir / Torbalı produces protective tape and packing tape. Annual production capacity is 100.000.000 m². Our factory is based on 8.000 m² area and consists of two parts as business and administrative. Duraba Tape produces environmentally friendly production. Duraba is an environmentally friendly operation with solvent recovery system.

Basic principles;

- 100% customer satisfaction,
- To produce solutions that meet customer needs,
- To follow innovations closely, to pass on these innovations with R&D department,
- Presenting new products to customers,
- To be respectful to people and the environment.

Surface Protection Tapes

There are two basic groups;

- Natural Rubber-Solvent Based,
- Acrylic Water Based,

Usage areas;

- PVC and Aluminum Profiles
- Sandwich panels
- Wood, Glass, Metal, Aluminum and Plastic surfaces

Avoid damage and contamination of products before installation and during storage.

Technical specifications;

- It has high UV resistance.
- Easy to disassemble and after removing, does not leave any residue.
- Black-White, White-White, Transparent and Blue-Transparent PE films are available.
- It can also be produced in the color requested by the customer.
- There are different adhesive options such as Natural Rubber Solvent based and Acrylic Water based.
- It can be produced between 30mm and 1550mm.
- From 25 microns thick to 100 microns thick and up to 1000 m long.
- Optionally, up to 6 colors prints can be produced.

Type	Protection Surface	Adhesive	Thickness	Adhesion Force	Sudden Adhesive Force	General Features
Black - White PE	PVC Profile	Natural Rubber Solvent Based	45 - 100 mic.	3 ± 0,5 N/25 mm	Min. 3	High UV resistance. It is used for the protection of products during transportation and installation processes.
Black - White PE						Up to 6 colors prints can be produced. It can be produced between 30mm and 1550mm.
Black - White PE	Aluminum Profile	Natural Rubber Solvent Based	45 - 100 mic.	3 ± 0,5 N/25 mm	Min. 3	High UV resistance. Used for the protection of anodized aluminum profiles.
White - White PE						Special productions can be made according to different anodized surfaces. Up to 6 colors prints can be produced. It can be produced between 10mm and 1550mm.
Black - White PE	Window Sill Surface	Natural Rubber Solvent Based	60 - 100 mic.	4 ± 0,5 N/25 mm	Min. 5	High UV resistance. Special formula for window sill surface. up to 6 colors prints can be produced. It can be produced between 10mm and 1550mm.
Black - White PE	Texture Aluminum Profile	Natural Rubber Solvent Based	80 - 100 mic.	8 ± 0,5 N/25 mm	Min. 10	High UV resistance. Special formula for texture aluminum profiles. up to 6 colors prints can be produced. It can be produced between 10mm and 1550mm.
Transparent PE	Quartz Surface	Acrylic Water Based	25 - 45 mic.	1,2 ± 0,5 N/25 mm	Min. 2	High UV resistance. Superior adhesion performance during standby on quartz surfaces. It can be easily removed from the surface. It can be produced up to 1550mm.
Transparent PE	Sandwich Panel	Acrylic Water Based	25 - 45 mic.	1,5 ± 0,5 N/25 mm	Min. 2	High UV resistance. superior adhesive performance during standby after application on sandwich panel surfaces. It can be easily removed from the surface. It can be produced up to 1550mm.

Packaging Tapes

There are two basic groups

- Natural Rubber-Solvent Based,
- Acrylic Water Based,

It is used to close all kinds of parcels and packages smoothly.

- It is transparent color.
- 36mm, 45mm, 50mm width or desired scale.
- No discoloration or deformation on the tape during storage
- It can be used comfortably at low temperatures.
